Key questions defining research program:

- How can we change healthcare delivery systems to improve opioid prescribing?
- What are effective ways of getting patients into and sustained on therapy for opioid use disorder?
- How does physician/clinician wellness and burnout impact quality and cost of care?

Key words describing research program:

- Substance use disorder
- Primary care
- Chronic pain
- Physician wellness
- Health services research

Titles for shovel-ready research projects:

- Do PCPs with nurse support start patients on opioids more frequently compared to PCPs without nurse supports?

Data sources for shovel-ready research projects:

- Secondary analyses of TOPCARE, a cluster randomized controlled trial comparing multicomponent intervention for opioid prescribing to care as usual
- Baseline data from SKIN, a RCT of 235 inpatients who inject drugs (comparing impact of a psychoeducational intervention on bacterial infections)
- A de-identified survey of >1000 physicians and APPs at Boston Medical Center, including 400+ residents and 600+ attendings on burnout, wellbeing, etc.
