Key questions defining research program:

- What is the relationship between chronic pain and key HIV outcomes?
- How can we design behavioral interventions for chronic pain tailored to individuals with HIV to optimize feasibility, acceptability, efficacy, and cost-effectiveness?
- How should concerning behaviors that arise among individuals on long-term opioid therapy be managed in primary care?

Key words describing research program:

- Chronic pain
- HIV
- Opioids
- Behavioral science
- Epidemiology

Titles for shovel-ready research projects:

- A resident could join the team of any of the projects described above and carve out their own niche. Please note that my title of “Visiting Associate Professor” is because I am new – I am not actually visiting, I'm here to stay!
