Key questions defining research program:

1) How to best assess/support cancer survivors’ QoL, symptoms, QoL, educational needs.
2) How to best support PCPs care efforts towards cancer survivors in light of the grey tsunami that is upon us, which will require PCPs to assume more responsibility as is already mandated in recent society’s guidelines.

Key words describing research program

1) Cancer Survivorship
2) Interface PCP and Oncology
3) QoL
4) Lifestyle
5) Symptom management

Titles for shovel-ready research projects

1) Does the addition of a personal trainer to a breast cancer survivor’s regimen increase their step count and QoL?
2) Do patient reported outcomes change in cancer survivors who are also seen at the survivorship clinic versus only seen at the regular oncology clinic?
3) Do cardiovascular risk factors change during the first year of aromatase inhibitor therapy in non-metastatic breast cancer survivors?

Data sources for shovel-ready research projects

1) Study data base
2) EMR data
